At the board meeting on June 8th the Village Board gave Chief Myers the approval to start the process of obtaining a new tanker to replace ETA-571 and TA-574. Bids specifications have been drawn up and the procurement process will be initiated. The new tanker will be a 1250 gpm 3500 gallon tanker on a commercial chassis. The truck will also feature a unique self-filling vacuum system.

On December 29, 2011 Schuyler Hose Co. placed its new tanker in full service. TA-574 is a 2011 E-One Water Master Vacuum Tanker on an International 7400 chassis with seating for a crew of two. The tanker is equipped with a 1250 gpm Hale Pump, a Vacuum Pump and 3500 gallon aluminum water tank.

Water Master vacuum tankers can be filled at up to 2000 gallons per minute without a Class A Engine at the fill site using its unique self-filling vacuum system. The tanker can self-fill from up to three suction inlets using almost any alternative water source including ponds, rivers, lakes, ditches and swimming pools.

TA-574 is designated as the second due apparatus for all rural responses in our district and can also be used as a supply engine at any major village fires. Two pre-connected attack lines are also available in the event a back up safety line is needed. Equipment carried on TA-574 includes:
